ROOM FOR
PEOPLE

PRESSALIT®

Pressalit Indivo height adjustable kitchen solutions

Kitchens should be accessible to everyone, regardless of a person's age or physical ability. Using a kitchen and its many different features can be a major challenge - unless it incorporates usable, flexible solutions. Choosing a height adjustable kitchen enables everyone to use kitchen features safely and confidently from a standing or seated position.

The flexible kitchen

Practicality, design, and independence

A Pressalit Indivo height adjustable kitchen system creates space for everyone. Whether standing or sitting, anyone can use all of the kitchen's features independently and conduct activities on the countertop.

For example, seated users can adjust the height of the countertop to accommodate their legs and adjust the height of wall cabinets. This puts kitchen utensils within easy reach.

Creating space for self-sufficiency

Loss of independence negatively affects quality of life. That is why it is so important to have a kitchen everyone can use without assistance.

Without a height adjustable kitchen, seniors and people with reduced physical ability often cannot perform normal kitchen activities. It can be hard to reach a pan on the stove without the risk of getting burned. Items in cabinets may be out of reach. Fall risks are increased. A flexible kitchen

solution, however, can be adjusted to suit the needs of everyone and enable any user to use the kitchen safely and efficiently. The increased degree of independence enhances the quality of life for the user.

First class user-friendliness

Using a kitchen should be easy - and the Pressalit Indivo height adjustable kitchen solutions make sure that it is. They are user-friendly and accommodate all users. The Indivo systems make partaking in kitchen activities easy and safe for everyone.

Safety

Our motorized height adjustable solutions include safety rails for mounting underneath the wall cabinets and edges of the countertop. The rails prevent the risk of injuries, as the movement of cabinets and countertops stops if a person or object comes into contact with the safety rail - even if the control button is still being pressed.

Better working environment for everyone

It is not only the user who benefits from a height adjustable kitchen. It also benefits caregivers and staff by reducing the physical strain involved in assisting users. Quite simply, it enhances the entire kitchen experience for everyone involved.

A flexible kitchen solution is a secure investment

If there are users of different ability levels or users with progressive conditions, who need to use the kitchen, height adjustable solutions are future-proof. The kitchen can be adjusted to accommodate a community situation or an individual user. You do not have to change your kitchen as the needs of users change over time.

Our flexible lifting devices fit the vast majority of standard kitchen units. That means you can use them either when a brand-new kitchen is being

installed or when an existing kitchen is being modified for disability use.

Different needs call for different solutions

No two people are alike. That is why solutions should be adapted to fit the people who use them. This is true whether you are installing a kitchen in a care home, a private dwelling, a school or sheltered housing.

The Indivo kitchen systems are universal and will fit the vast majority of countertops, wall cabinets, and free-standing units. We are always ready to provide advice throughout the entire process to ensure you choose the best solution for your specific needs.

” We are experts when it comes to putting together solutions to suit a particular project and the users who will be using the kitchen. That's why we are always ready to help you and provide advice on everything from assessing requirements to choosing the right products

Karsten Hedeman Sørensen, Sales Consultant, Pressalit A/S

Accessible assisted living

A stylish, safe solution

The Blackwood House is located in Dundee, UK. It houses six apartments adapted for people with various kinds of disabilities. Here, it is always about helping people to live a more independent life – in part, through the use of technology.

Height adjustability = flexibility

Adaptable interiors are required to fit the changing needs presented by residents with progressive conditions, or by new residents moving into the apartments.

That is why Blackwood decided to install Pressalit Indivo height adjustable kitchen solutions in all of their apartments. The height adjustable wall cabinets and countertops enable all residents to be self-sufficient in the kitchen – even if their needs change over time. Simply by pushing the button, they can adjust the height so the kitchen immediately suits their needs safely and efficiently.

Cooking with room for everyone

Both stoves and sinks are now within reach, since wheelchair users can fit their legs under the countertops. Kitchen utensils in the wall cabinets are now accessible because the cabinets are moving down towards the user. This makes the entire kitchen more easily accessible, regardless of physical ability.

Blackwood previously had no wall cabinets in the kitchens, because they were not accessible. But now, thanks to Pressalit's technology, wall cabinets are a feature of the fully accessible kitchen - to the delight of the residents.

Exceptional collaboration

Blackwood chose Pressalit to supply their kitchen and bathroom solutions because they were looking for flexible, functional, and ergonomic solutions. The partnership is now continuing in several more of Blackwood's new residential and renovation projects. Pressalit's solutions are being installed as a part of an overall vision to use technology to enhance the everyday lives of residents and caretakers.

” Blackwood is a great example of how the modern technology featured in our kitchens can meet the fundamental challenges that care assistants, relatives, and citizens encounter in their everyday lives.

Adam Southcott, Sales Consultant, Pressalit A/S

” Pressalit's solutions are perfect for the new assisted living facilities. The modern design is practical, capable of being adapted to suit each person, and bears no resemblance to the clinical solutions of the past.

Colleen Robertson, Marketing Manager, Blackwood Care Homes
