PRESSALIT®

Pressalit MATRIX Height and Sideways Adjustable Washbasin Solution

Flexible, adjustable solutions in the bathroom make a world of difference for both users and carers. Functionality, safety and working environment are paramount in Pressalit's new height and sideways adjustable washbasin solution.

The new solution supports self-reliance, training, space optimisation and, most importantly, a sense of security in the bathroom, whether in a private home, a care home, institutions or hospitals.

Height and Sideways Adjustable Washbasin Solution

500 mm / 18 inches

Functionality With Countless Options

Pressalit's new height and sideways adjustable washbasin solution is the ultimate in functionality and hygiene. Comprising a washbasin bracket and washbasin, it is available in a number of different versions.

Make the best use of space in the bathroom, while accommodating the changing needs of both users and caregivers. The applications are endless and you can choose either manual or electric operation, depending on your needs.

Hygiene Is Paramount

The cover of our new, sideways adjustable washbasin encloses all the electronics and mechanical parts, so nothing is exposed. The result is an incredibly hygienic solution, in which the cover fits snugly to the sink and the unit sits tight against the wall.

This means that neither dirt nor grime can penetrate hard-to-reach places. It also facilitates cleaning and reduces the risk of bacteria spreading.

For use in hospitals a special, hygienic drain plug is available, which ensures easier cleaning and thereby less risk of infection.

”Adjustable, flexible solutions in the bathroom mean more time and space for presence in everyday life. Quite simply, the right aids enhance a person's quality of life.

Claus Lund Albertsen, Sales Director, Pressalit A/S

Make The Very Best Use Of Space

Being able to move the washbasin along one wall of the bathroom means you can make the very best use of the available space and, at best, save a building's crucial square metres.

For example, you can move the washbasin away from the toilet to create space for caregivers or closer to the toilet to create space around the shower and bathing area. The movable washbasin also makes it easier to manoeuvre a wheelchair in the bathroom.

Innovation Accommodates Numerous Needs

The washbasin can be used in connection with training, where self-reliance for sitting and standing users is paramount. It can be moved horizontally and vertically to support the specific needs of an individual and the necessary space. The washbasin is ideal for bathrooms with many users. The electric variant, in particular, offers very easy height adjustment. It is also easy for anyone to slide the washbasin to the side, even if they have impaired function in their hands and fingers.

The easy sliding and adjustment of the washbasin also supports healthcare professional, providing less physical strain in their work routines.

PRESSALIT®

A multi-purpose washbasin

- Easier personal care for the user
- Training and greater focus on self-reliance
- Optimal use of space in small bathrooms
- Time-saving assistive device for staff
- Improves working conditions for healthcare staff

The Ideal Choice For The Care Situation

Pressalit's new washbasin solution is the ideal choice for care homes, institutions and hospitals, where there is a need to adapt to the individual user or carer - often several times a day. The more self-reliant a user is, the more time is freed up for other tasks. At the same time, there is focus on the working environment and on hygiene.

Adjustable Solutions Enhance Quality Of Life

Sometimes their needs change through the course of the day. This places great demands on the available aids. A flexible solution, which takes into account the specific needs of the user at any given time, helps create situations that boost

independence and help provide a greater degree of self-reliance. For some people this also means the opportunity to take care of more of their personal care themselves.

Create Optimal Working Conditions

Adjustable solutions in the bathroom are advantageous for users and of huge assistance for changing carers. For example, the option of adjusting the height is crucial for good working positions. This has many benefits in the likes of a care home or hospital. Self-reliant residents or patients free up time for the nursing and healthcare staff, while secure, flexible solutions create better conditions and thus a better physical working environment with fewer occupational injuries.

Use the Washbasin Wherever You Need It

A sliding washbasin creates necessary space around the toilet whenever required. This makes it easier to manoeuvre a wheelchair. Moreover, when more space is needed around the shower, being able to move the washbasin will improve both the working environment and the intimate situation of bathing.

When the washbasin is used to help move from a wheelchair to the toilet to be easily adaptable and consequently suitable for any situation.

The washbasin can be moved sideways in seconds at the touch of a release button, which makes it easy to create the necessary space for a task - be it around the toilet or in the shower area.

The washbasin slides easily and requires very little effort. It can be operated using the back of the hand, if a user has reduced function in their hands and fingers.

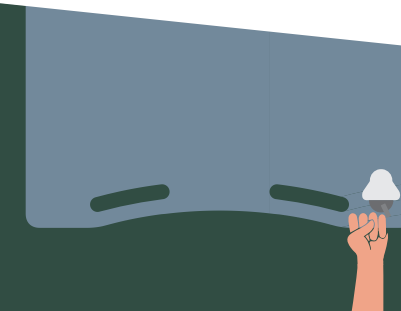

World-Class Hygienic Functionality

The combination of functional properties in terms of hygiene makes this height and sideways adjustable washbasin the perfect choice in any environment where optimal conditions for both user and carer are paramount. The movable elements of the washbasin and washbasin bracket are concealed behind a cover that moves tight against the wall and fits snugly to the washbasin, preventing dust and dirt from settling in hard-to-reach places.

All surfaces are large, smooth and easy to wipe. There is also the option of a washbasin with no overflow hole or of a special drain plug for hospitals. This facilitates cleaning and reduces the risk of unwanted collection of dirt, meaning less risk of infection.

” Good hygiene and easy cleaning are crucial in assistive devices with moving elements. In the new MATRIX washbasin solution, the cover fits snugly against the basin and hugs the wall tightly”

Claus Lund Albertsen, Sales Director, Pressalit A/S

Easy to operate and easily accessible release button – even for weak hands.

Several Users Requires Several Settings

In a private home, a bathroom typically has several users, most often with different needs and physical abilities. In this context, each use of the bathroom requires different settings.

When there are both seated and standing users in a home, there is a natural height difference. That is why a flexible, adjustable solution is preferable. This makes it easy to accommodate specific situations and needs.

Flexibility For The Entire Family

One of the principal areas of a bathroom is the washbasin. This is where much of our daily care takes place. It is crucial to be able to use the washbasin in the most appropriate way - not only for shaving, applying makeup or brushing teeth, but also to help prevent falls.

The integrated handles help you to stand after using the toilet, and you can wash your hands while still seated, before transferring to a wheelchair.

In other words, there are many issues to take into account when designing a bathroom in your own home: everything from the very best use of space in an existing bathroom to arranging the solutions that best accommodate existing needs and needs that may evolve over time.

Easy Adjustment – Electric or Manual

It should be easy to adjust a washbasin to suit the needs of the entire family and everyone should be able to operate it. The new height and sideways adjustable Pressalit MATRIX washbasin solution is available with two different adjustment options: electric or manual.

If you live alone, or if all the people living in the home have the same needs, there will only rarely be a need for adjustment of the height of the basin, and manual height adjustment may be a good solution. Conversely, if there are several people with different needs, easy, quick electrical adjustment is preferable.

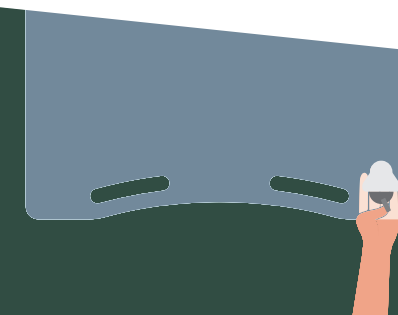

Move The Washbasin In Seconds

Adjust the basin sideways by triggering an easily accessible feature under the basin. It only takes a few seconds to move the washbasin and washbasin brackets and it can be done safely with one hand. In other words, most users will be able to use the washbasin independently, positioning it to assist their standing and/or transferring or simply to reach the basin and wash their hands, while still sitting on the toilet.

It moves smoothly and requires very little strength in the hands, so both the user and carer can easily move the washbasin as often as required - even with the back of a hand. When you let go of the release button, this locks the washbasin in that position and ensures that the washbasin does not move again before you choose to move it.

” *In private homes, the changing needs of the home’s residents place great demands on the flexibility of assistive devices in the bathroom.*

Claus Lund Albertsen, Sales Director, Pressalit A/S

Move the washbasin easily by pressing the release button. The sink locks when you release the button again.

PREMIUM BATHROOM SOLUTIONS SINCE 1954

Pressalit A/S is a Danish privately owned company with production facilities in Ry, Denmark. Since 1954, we have been designing and producing toilet seats of the highest quality. And since 1975, Pressalit has also been developing accessible bathrooms and height adjustable kitchen solutions for people with reduced mobility. This has made us one of the world's leading manufacturers of premium bathroom solutions. High quality, flawless design and reliable functionality are the core features of our wide range of products.

Choose The Optimal Solution For Your Needs

Pressalit's height and sideways adjustable MATRIX washbasin solution consists of a washbasin bracket and a washbasin. The washbasin bracket is available with a MATRIX MEDIUM or MATRIX ANGLE DEEP washbasin, so you can choose the most suitable washbasin for the bathroom and the specific needs. The washbasin solution can be adjusted both in height and sideways. You can adjust the height either manually or electrically, depending on the model, and the total travel is 500 mm sideways and 300 mm in height.
